

IMAporter IDcloud Admin

Provides convenient central management,
overview and control

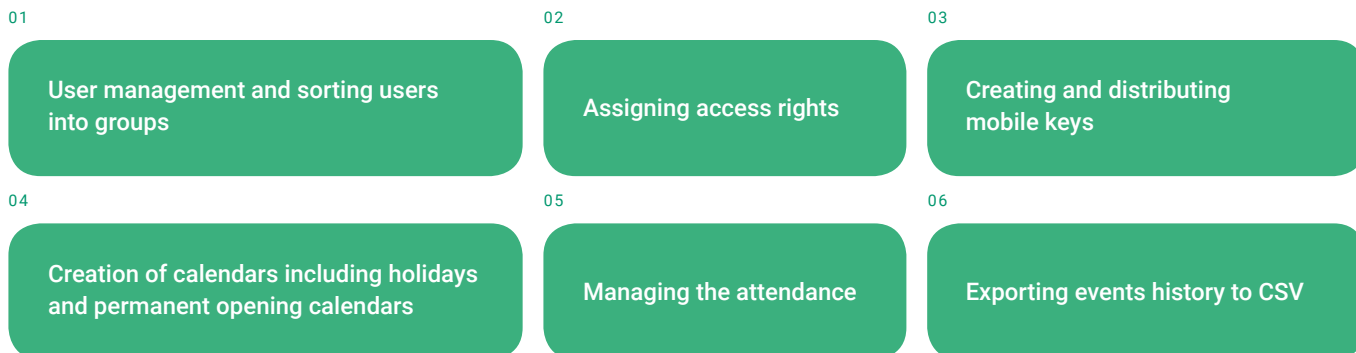

What is cloud access control?

Cloud access control system provides convenient central management, overview and control. All this is done remotely from any computer with an internet connection, without the need for an administrator to be physically present inside the

secure facility. The IDcloud Admin system is easy to deploy and offers many functionalities in the area of access control or optionally also attendance control.

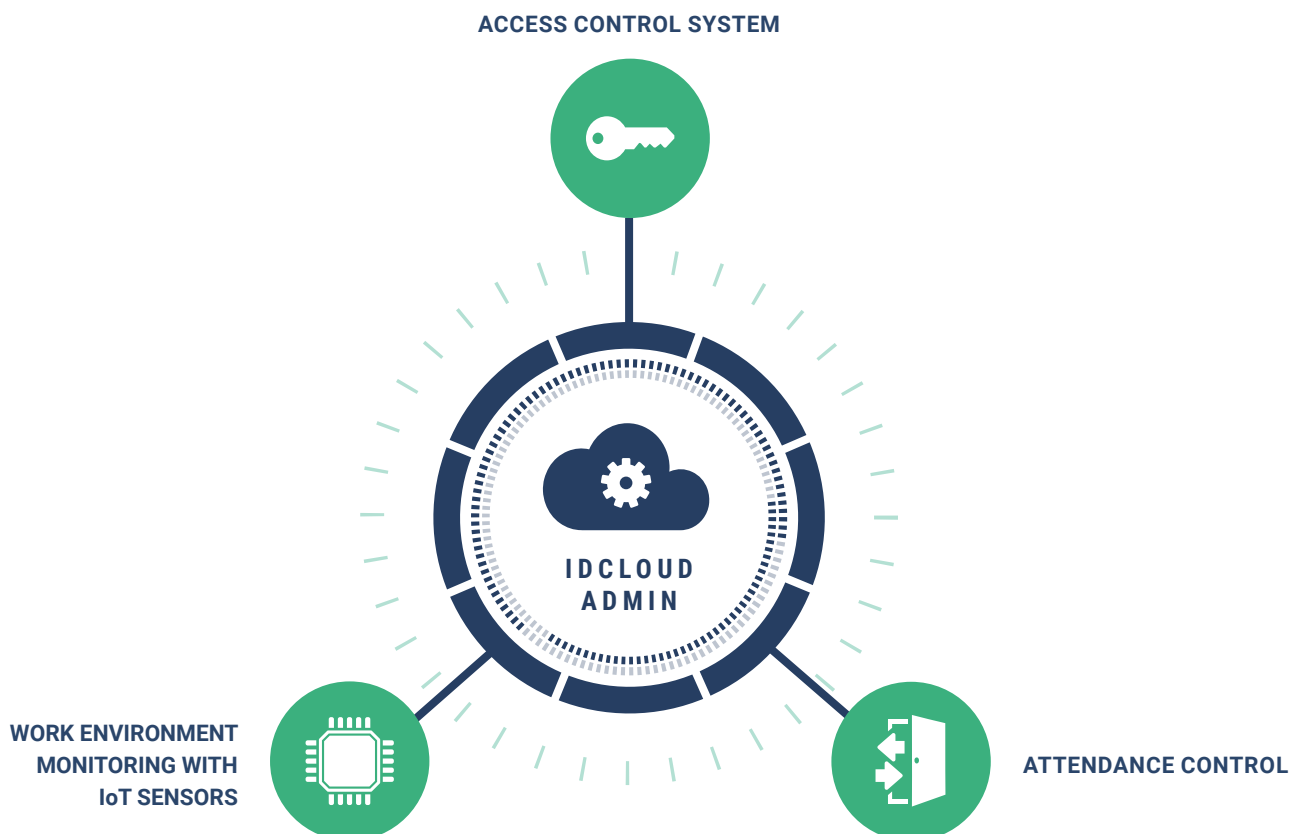

Cloud-based access control system functionalities

IDcloud Admin system offers many functionalities for comprehensive access control. Thanks to the cloud technology, it is possible to perform these processes remotely:

With the support for distributor-level accounts, IDcloud Admin offers interesting possibilities for B2B collaboration as well.

IMApporter IDcloud can be further extended by add-on modules to create a comprehensive system for smart building management

Cloud vs. local access control system

CLOUD-BASED

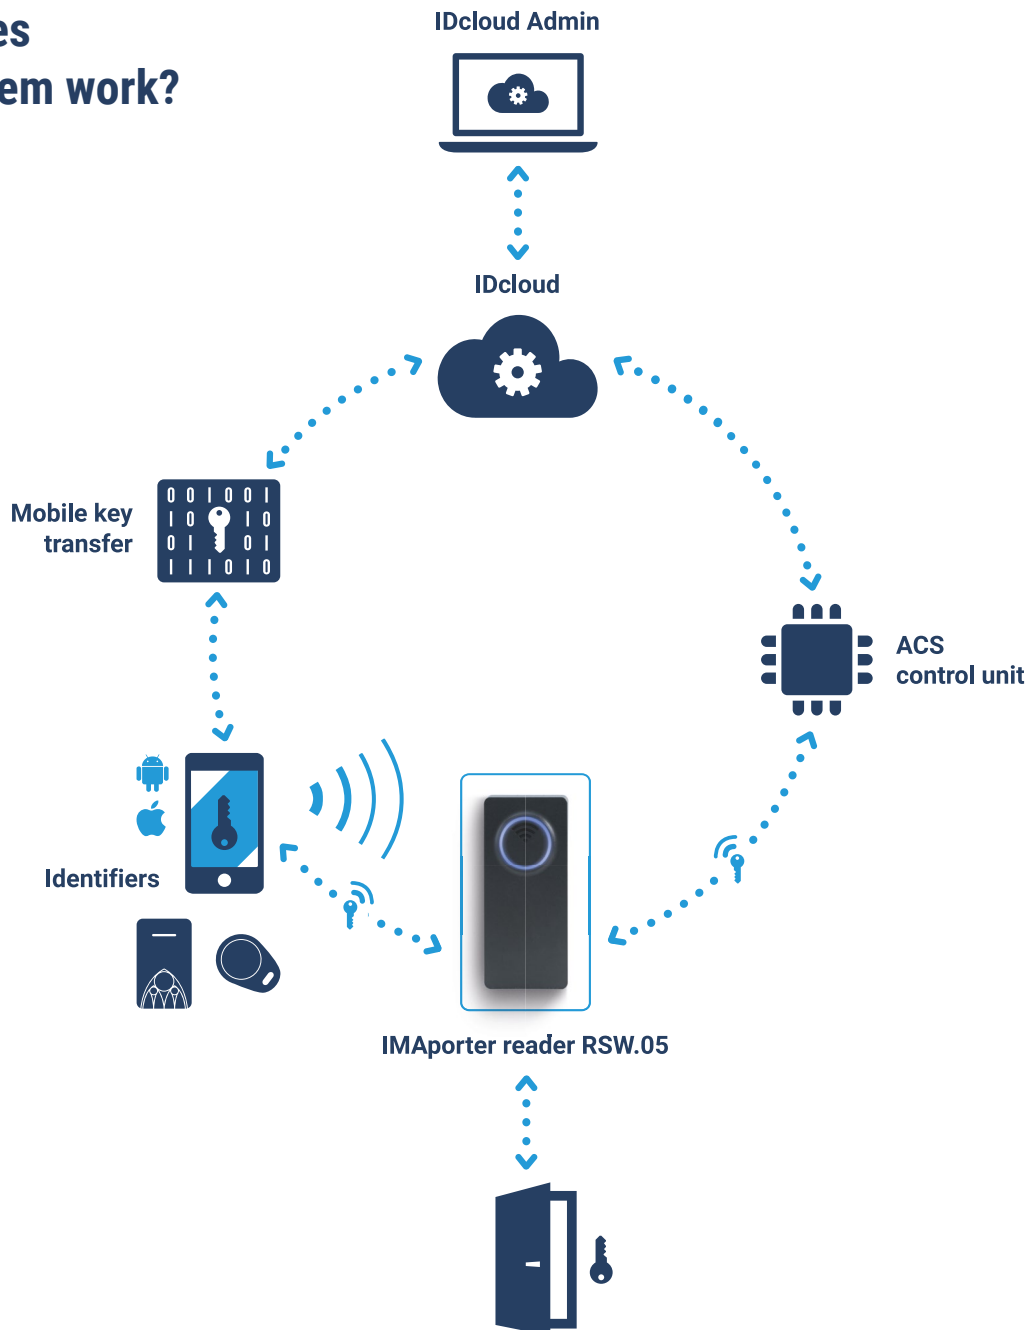

- + No need to provision and maintain a local server
- + Remote management of the access control system
- + Remote system upgrades possible
- + Extensibility by additional modules
- + Basic version of the system without any license fee

LOCAL

- Maintenance costs for local server
- System administration only at the installation site
- Local system upgrades
- Not very extensible
- Higher acquisition cost

How does the system work?
